Problem Statement: Apple users all around the world love listening to new music during their free time, so it would be great if they could customize and rearrange their Apple music homepage. Our solution should give apple music users the comfort of listening to music by their way of setting and rearranging it up.

Who does this affect? This affects Apple music users who enjoy listening to music and would love a way to quickly get to their favorite songs, albums, favorites, etc.

What is the problem? The problem is that for apple music users, they cannot change their music homepage.

Where is the problem presenting itself? Everything on Apple Music released, saved, or playing, is set up as square boxes with the same fonts and it takes too many taps to get to where you need to go.

Why is this important? This is important because millions of people use Apple music as their go to streaming source and they would enjoy unleashing their creative ideas to set their own specific vibe so they are able to enjoy their music better.
